Methodology: Nucleic Acid Amplification Test (NAAT)

Due to the current public health emergency, Quest Diagnostics is receiving a high volume of samples from a wide variety of swabs and media for COVID-19 testing. In order to serve patients during this public health crisis, samples from appropriate clinical sources are being tested. Negative test results derived from specimens received in non-commercially manufactured viral collection and transport media, or in media and sample collection kits not yet authorized by FDA for COVID-19 testing should be cautiously evaluated and the patient potentially subjected to extra precautions such as additional clinical monitoring, including collection of an additional specimen.

This test has been authorized by the FDA under an Emergency Use Authorization (EUA) for use by authorized laboratories.

Please review the "Fact Sheets" and FDA authorized labeling available for health care providers and patients using the following websites:
<https://www.questdiagnostics.com/home/covid-19/HCP/QuestIVD/Fact-sheet.html>
<https://www.questdiagnostics.com/home/covid-19/patients/QuestIVD/Fact-sheet.html>

A Not Detected (negative) test result for this test means that SARS-CoV-2 RNA was not present in the specimen above the limit of detection. A negative result does not rule out the possibility of COVID-19 and should not be used as the sole basis for treatment or patient management decisions. If COVID-19 is still suspected, based on exposure history together with other clinical findings, re-testing should be considered in consultation with public health authorities. Laboratory test results should always be considered in the context of clinical observations, and epidemiological data in making a final diagnosis and patient management decisions.

 History: hx flat feet pain
 Prior: Exams: FILM BILATERAL FEET
 Referring Phy: Ordering Phy: sceusa camp
 Ordering Phy #: 609 723 1100 x1175
 Accession Numbers: 202#BOP00148948

Final Report

Exam: FILM BILATERAL FEET

HISTORY: History of flat feet. Pain.

TECHNIQUE: Nonweightbearing AP, oblique and lateral views of each foot. Weightbearing lateral views of each foot.

COMPARISON: None

FINDINGS:

Right: Normal bone mineralization. There is mild pes planus deformity on the weightbearing lateral view. No acute fracture, dislocation. Metatarsus primus varus and hallux valgus with osseous and soft tissue bunion formation. First metatarsophalangeal angle is 16°. Mild osteoarthritis of the great toe MTP joint with mild-moderate joint space narrowing and small marginal osteophytes. The other remaining joint spaces are maintained. No articular or peritarticular erosions. Soft tissues appear unremarkable. Incidental note is made of an os trigonum.

Left: Normal bone mineralization. There is mild pes planus deformity on the weightbearing lateral view. No acute fracture, dislocation. Metatarsus primus varus and hallux valgus with osseous and soft tissue bunion formation. First metatarsophalangeal angle is 18°. Mild osteoarthritis of the great toe MTP joint with mild joint space narrowing with small marginal osteophytes. The other remaining joint spaces are maintained. No articular or peritarticular erosions. Soft tissues appear unremarkable.

IMPRESSION:

1. Bilateral metatarsus primus varus and hallux valgus with osseous and soft tissue bunion formation. Right first metatarsophalangeal angle is 16°. Left first metatarsophalangeal angle is 18°.
2. Mild pes planus deformity bilaterally on the weightbearing lateral views.
3. Mild osteoarthritis of the bilateral great toe MTP joints.
4. No acute bony abnormalities.
5. Incidental note of right os trigonum.
